# The OpenStack Gate

# What Happens when you push a change?

Newly uploaded patchsets enter this pipeline to receive an initial +1/Verified vote from Jenkins.

Change queue: **openstack/neutron**

# The Size of the Gate

## One Proposed Change Generates:

- ▶ 5–25 Devstacks
- ▶ ~10,000 integration tests (roughly 1.5k per devstack)
- ▶ ~150 2nd level guests created in devstack cloud
- ▶ ~1 GB of logs uncompressed for each run

## In aggregate:

- ▶ ~12,500 jobs run in check and gate daily
- ▶ ~0.01% individual tempest test failure rate
- ▶ ~.77% tempest run failure rate

## Number of Tempest Tests per Day in the Gate Queue:

## Existing Data Sources

- ▶ Log Server: <http://logs.openstack.org/>
- ▶ elasticsearch, logstash, and kibana
- ▶ graphite and grafana
- ▶ elastic-recheck
- ▶ subunit2sql

# What is OpenStack-Health

# OpenStack-Health Architecture

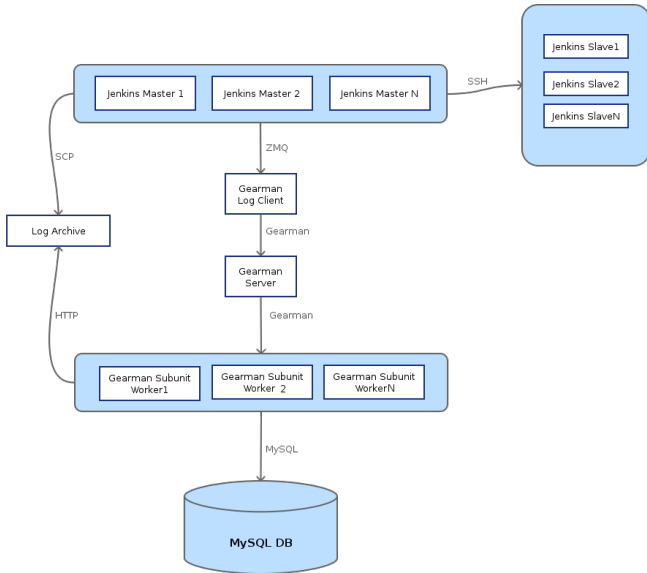

# API Server

- ▶ Wraps subunit2sql DB API using flask
- ▶ Runs at <http://health.openstack.org>
- ▶ Continuously Deployed on every commit
- ▶ API not intended for external consumption
- ▶ Built with the intent to incorporate additional data sources

## subunit2sql

- ▶ A utility for storing and interacting with test results in a SQL DB
- ▶ Setups a DB schema and provides a sqlalchemy based DB API for storing test results
- ▶ CLI utilities for storing and retrieving results in the DB as subunit v2
- ▶ A public database of everything with subunit output from gate and periodic run in OpenStack-Infra

## subunit2sql Data Collection

# Frontend

- ▶ Built using AngularJS and NVD3
- ▶ Calls API server for data and renders in browser
- ▶ Located at: <http://status.openstack.org/openstack-health>
- ▶ Continuously Deployed on Every Commit

# Using OpenStack Health

OpenStack Health is a dashboard for visualizing test results of OpenStack CI jobs.

## Current Limitations

- ▶ Only data from gate and periodic queues
- ▶ Only catches failures without subunit data (or that occur before or after subunit generation)
- ▶ Failures outside of what's covered by subunit aren't counted
- ▶ Jobs that don't have subunit output aren't included

## Next Steps

- ▶ Include other data sources:
  - ▶ Use zuul as source for run/job level data
  - ▶ Integrate elastic-recheck data for run\_failures
- ▶ Include data from check and experimental queues
- ▶ UI improvements

## Where to get more information

- ▶ openstack-dev ML [openstack-dev@lists.openstack.org](mailto:openstack-dev@lists.openstack.org)
- ▶ #openstack-qa on Freenode
- ▶ <http://git.openstack.org/cgit/openstack/openstack-health/>
- ▶ <http://git.openstack.org/cgit/openstack-infra/subunit2sql>
